CCAS-PAEM-48 unequipped

19-inch 1U 48-port Unloaded Patch Panel, Black

The securityNET Unloaded Patch Panel for CCAS-Kx-xxx Series Modules is designed for terminating twisted-pair cabling in a standard 19-inch telecommunications rack. The panel is supplied unloaded, allowing the installation of up to 48 keystone modules. It is also compatible with shielded keystone modules.

Number of ports	48 x RJ45
Height	1U
Color	RAL 9005
Material	Sheet steel
Shelf	not
Rear	sockets for keystone modules

More stable design offering better management

The panel is equipped with a guide to facilitate the attachment of cables mounted on LSA connectors at the rear. Combined with the guide, it is less stressed by pushing cables, making it easier to organize cabling inside the cabinet. Cables arranged in this way will serve us longer and better.

High quality workmanship with the user in mind

SecurityNET panels are designed and manufactured so that the installer has confidence in the performance of the installed LAN components. In caring for the solutions provided, the panels undergo a series of quality checks at the manufacturing facility.
