

CCAS-PA6-24UTP-O

## Category 6 19-inch 1U 24xRJ45 UTP Patch Panel black with shelf

The securityNET Category 6 UTP (Unshielded) Patch Panel is designed for installing twisted-pair cable terminations in a 19-inch telecommunications rack. It is ideal for installations in computer networks, telephone systems, CCTV systems, etc., that are not exposed to electromagnetic interference. The panel meets the requirements of structured cabling standards: ISO/IEC 11801, EN 50173, EIA/TIA 568-B.2.

## Technical specifications

Category 6 19-inch 1U 24xRJ45 UTP Patch Panel black with shelf

|                 |               |
|-----------------|---------------|
| Number of ports | 24 x RJ45     |
| Category        | 6             |
| Shielding type  | UTP           |
| Height          | 1U            |
| Color           | RAL 9005      |
| Material        | steel sheet   |
| Shelf           | yes           |
| Rear            | LSA terminals |

### More stable design offering better management

The panel is equipped with a guide to facilitate the securing of cables mounted on LSA connectors at the rear. The panel, in combination with the guide, is less stressed by the incoming cables, which simplifies cable organization within the rack. Properly arranged cables will provide longer and better service.

### High quality workmanship with the user in mind

SecurityNET panels are designed and manufactured so that the installer has confidence in the performance of the installed LAN components. In caring for the solutions provided, the panels undergo a series of quality checks at the manufacturing facility.
