Fiber optic cable storage frame 600x600x100mm

The 600 × 600 × 100 mm cable storage frame is designed for aerial fiber optic closures of the FHAC 292 series. This version of the frame, equipped with a mounting bracket, is ideal for storing excess ADSS cables and also allows installation of the FHAC closure in its central section. The frame is mounted on ADSS line poles, with the cable slack stored on the outer arms of the frame. Thanks to its robust construction made of high-quality aluminum, the product ensures durability and resistance to weather conditions.

It is an essential component in aerial fiber optic installations, ensuring proper organization and safety of ADSS cables. Thanks to its robust construction and resistance to weather conditions, the product meets the highest standards of quality and reliability.

Technical specifications

Fiber optic cable storage frame 600x600x100mm

Maximum cable diameter	24mm
Dimensions (H/W/D)	600 x 600 x 100 [mm].
Weight	1.6 kg
Material	High-grade aluminum

Easy installation

The cable storage frame is designed for installation on poles using stainless steel banding with clamps (not included), allowing for quick and easy mounting in the field. The product is lightweight, weighing only 1.6 kg, which further facilitates installation and handling.

High-quality materials

Made of high-quality aluminum, the frame is resistant to UV radiation, ensuring durability and reliability in harsh weather conditions. Flat bars with dimensions of 30 × 5 mm provide strength and structural stability.
